

NewAge IoT solution to monitor Fire Alarm System in real-time.

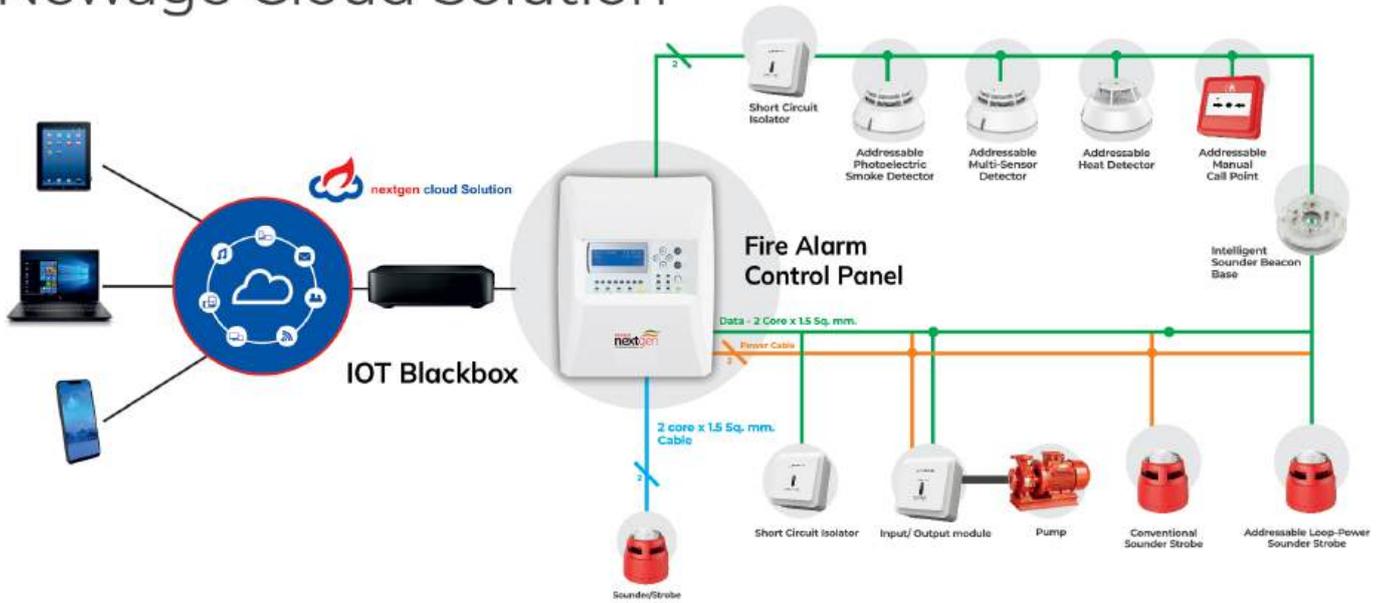

IoT gateway devices could also find their role in the Fire Detection & Alarm sector. It can be used for monitoring the location and provide status of FAS data which are obtained from smoke sensors. It not only helps in Fire Alarms providing fire status & Fault status. it can also be utilized to monitor health of Fire Alarm System.

NewAge Blackbox Applications.

Blackbox applications could be seen everywhere. Some emergency response systems such as fire & flame detection could benefit a lot from the IOT networks. IoT devices such as Fire Alarm systems or sensors can aggregate information including address of location, area information, and more. Blackbox will receive these data and transmit to cloud for analysis. In this way, those emergency responses can accomplish their tasks more easily & reduce Fatality.

Newage Nextgen IoT Fire alarm panel & Newage Cloud Solution

Data representation in Graphic formats

Edge to Cloud distributed Intelligence with over 150+drivers & connectors

Rich HTML5 graphics for dashboards, 3D equipments maps, SLD, etc.

Encrypted data security at Edge, Fog, Local, private Cloud & Public Cloud Level

Powerful alarm management to creator drive results in real-time

Enhanced data analytics with Self-learning and artificial Intelligence

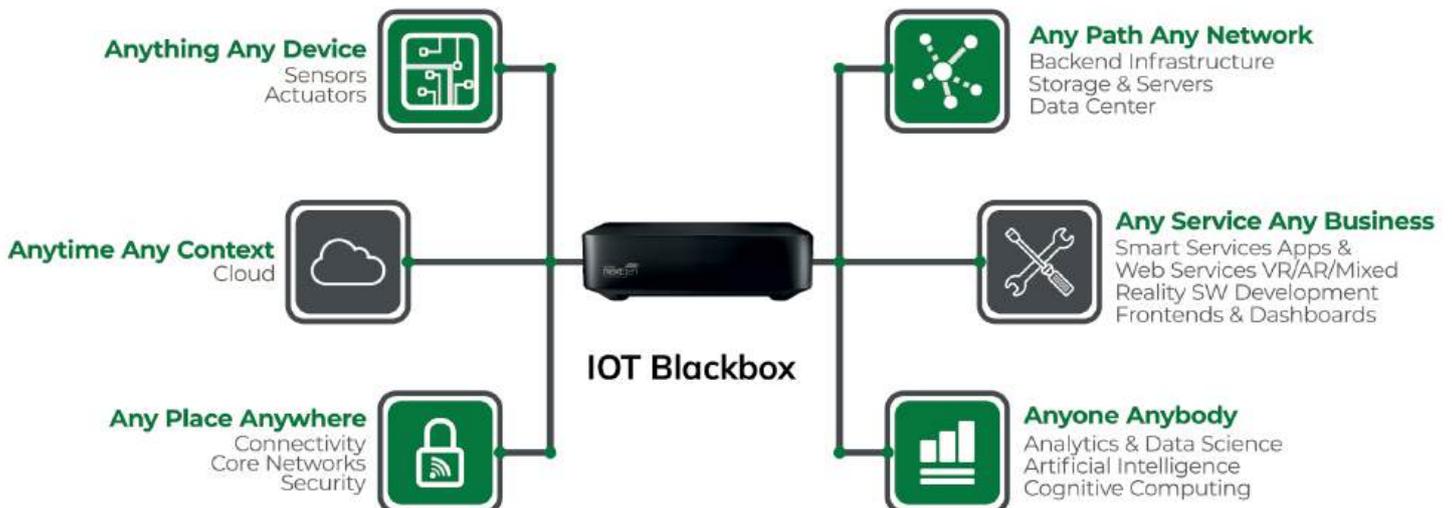

Robust alarm management capability to drive outcomes in realtime

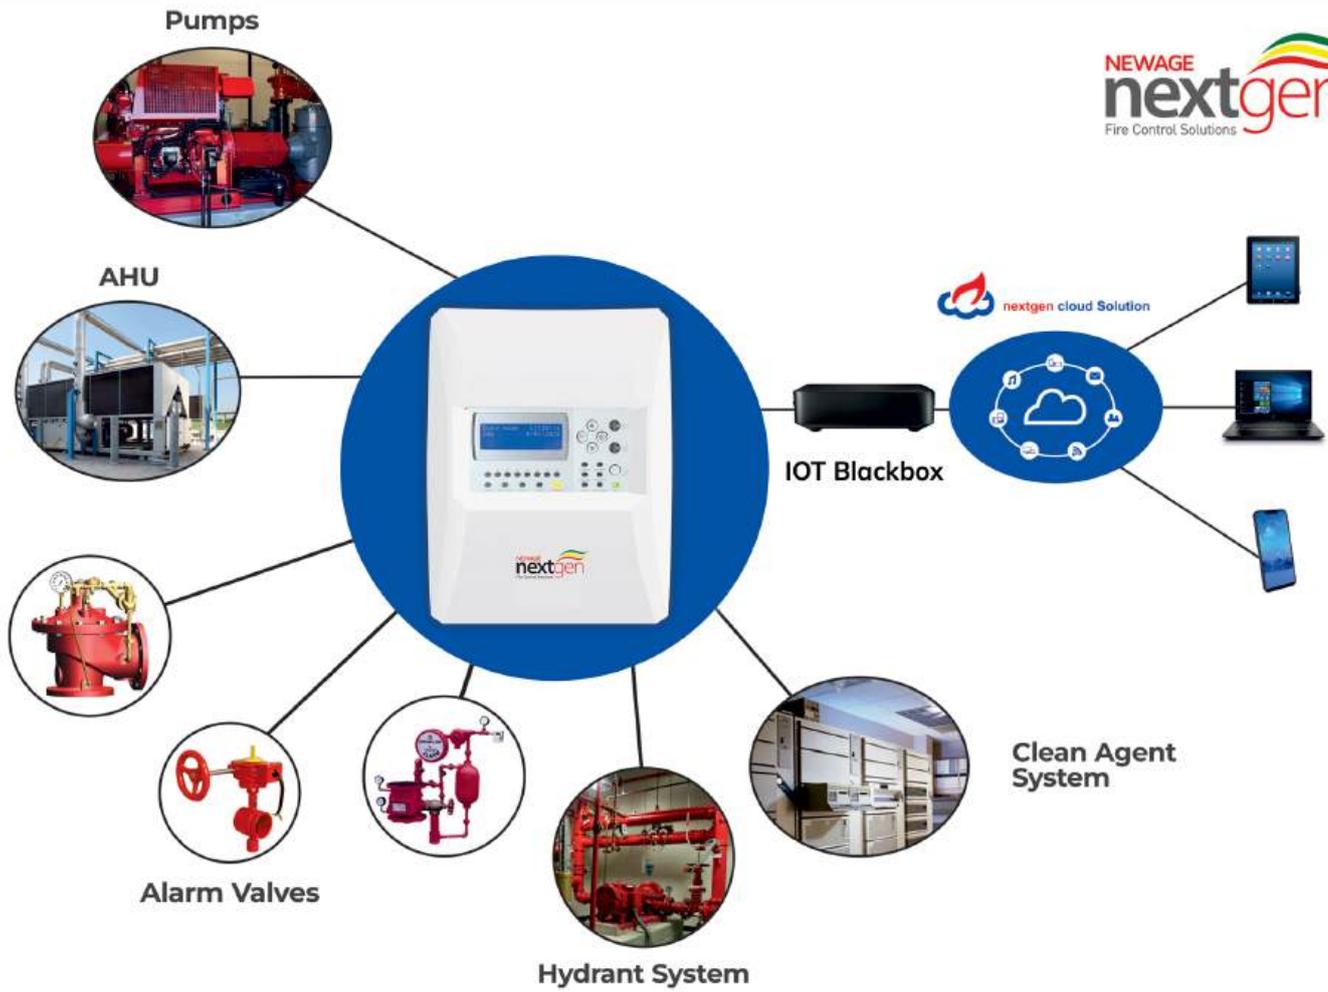

Edge based Intelligence

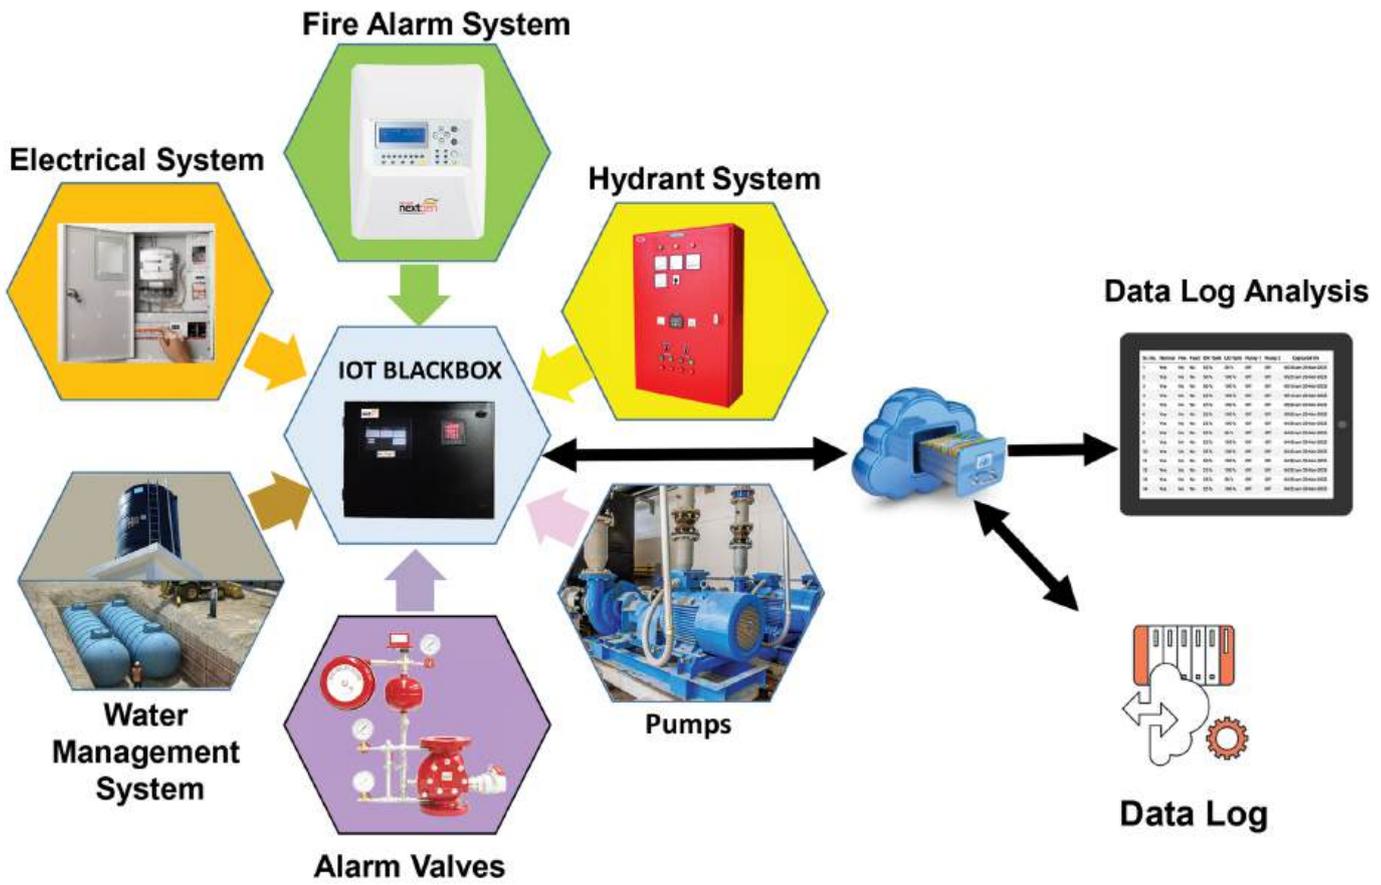

Plug-Play-Collect-Deliver-Analyse-Improvise

NEWAGE NEXTGEN CLOUD SOLUTION

Wiring for IOT Blackbox

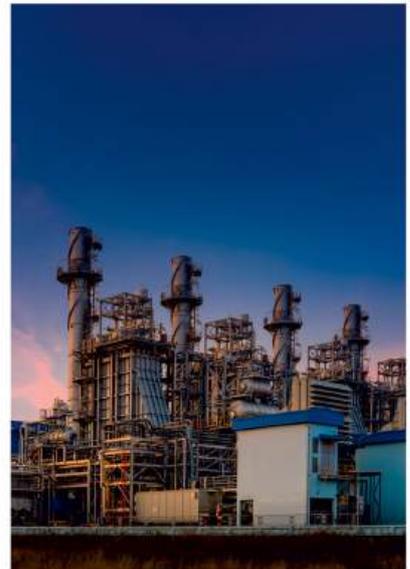

Revolutionary Fire Safety, IoT-Driven Fire Detection and Alarm System for Smart environments.

NewAge Fire Alarms systems are ideal for various Industries.

Hospitality/ Hotel Lobby and other area

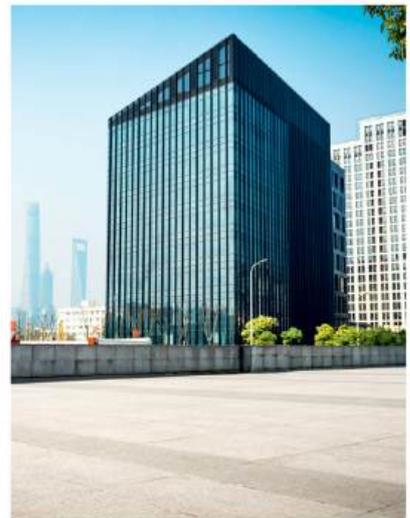

Oil & Gas Industries

Manufacturing Industries

Corporate Offices

Business Parks

Ware Housing Industry

Shared offices and Business hubs

Large Industries

Maharashtra Fire Department Norms:

1. Protection to minimize the risk of arcing.
2. Short Circuit protection.
3. Over current protection.
4. Earth leakage protection.
5. Over voltage protection.
6. Under voltage.
7. Phase loss protection.
8. Phase reversal protection.
9. Consideration during loss of supply to neutral.
10. Voltage quality.
11. Detection of Loads with low power factor.
12. Detection of Loads with high harmonics.
13. Detection of Loads with high in rush.
14. Detection of unbalanced or asymmetric loads.

Summary of 2021–2025 Circulars

ADVISORY	MANDATORY	LAW (AMENDMENT)	LAW (ENFORCED)
2021	2022	2023	2025
Energy Dept.	Mumbai Fire Brigade	State Assembly	
<ul style="list-style-type: none"> IoT microcontroller recommended NABL, CEI certification stipulated 	<ul style="list-style-type: none"> Required for BMC Fire NOC Integrated with BMS/cloud 	<ul style="list-style-type: none"> IoT monitoring mandated Offenses, penalties revised 	<ul style="list-style-type: none"> Only licensed agencies install Forms A-1/B- introduced

MAHARASHTRA GOVERNMENT GAZETTE

IoT-Based Fire System Monitoring Mandatory

An official government notification reinforces the mandatory installation of IoT-based monitoring systems for fire safety in new and existing buildings.

Key Requirements

-  Mandatory IoT integration with:
 - Pump & DG rooms
 - Water tanks
 - Smoke detectors circuits
 - Sprinkler/hydrant systems
-  Cloud storage plus real-time alerts linked to the fire brigade
-  Applies to all new high-rises, and buildings undergoing repairs or change of use

NEWAGE
FIRE PROTECTION
